Four winning business divisions:
**DLK's building blocks
to success**

*Tanja Henkelmann,
managing director of DLK GmbH*

“

*In the context of Intralogistics 4.0 and distribution,
modern warehouse systems are now a vital element
in efficient and sustainable trading – but also in being
and remaining competitive on various levels.”*

Intralogistics

The key to success

Your warehouse is a core capital asset.

It's therefore obvious that up-to-date logistics involving perfectly coordinated resources and processes can not only increase efficiency and cost-effectiveness, but above all can offer decisive competitive advantages.

Our team at DLK ensures that your warehouse equipment acts as an elementary interface for material flow in interaction with conveyor and packaging technology to guarantee a functioning supply chain.

DLK warehouse equipment

Comprehensive service from a single source

**We see comprehensive services
as both our mission and passion.**

As proven experts in the warehouse equipment sector, we've made it our objective to provide our customers with a single source for assistance with all the conceptual steps leading to a (new) logistical design and the associated optimisation of processes.

We view ourselves as your partner and always work as equals to develop the individual solution that meets various industrial requirements from a wide range of sectors. This has enabled DLK to steadily expand its expertise and know-how based on countless projects over many years.

Our comprehensive service means that you always receive considered and coordinated concepts, timely project implementation and thus ultimately also reduced costs and effort.

It's irrelevant whether you're a small business, a medium-sized company or a large corporation. We also act internationally, and, as necessary, with a well established network of business partners.

DLK's building blocks to success

Our versatility results in your flexibility

Four winning business divisions – Our managerial skills are reflected in our diverse service portfolio. Use DLK to optimise the versatility of your logistical warehouse system:

Products

- Warehouse mezzanines/DLK Levelmaker®
- Modular shelving systems
- Textile hanging goods storage units
- Trolley systems
- Pallet bays, shelving racks, cantilever racks
- Special and customised conveyor equipment
- Modular packing tables
- Resale products (Wanzl trolleys and cages, workstations, packaging tables, strapping machines, etc.)

Industrial disassembly and dismantling

- Complete dismantling solution from a single source:
 - > Concept development
 - > Coordination of trades
 - > Execution
 - > Handling of harmful, disruptive and recyclable materials
 - > Direct distribution
- Procurement of warehouse equipment, machines and accessories

Services

- Ongoing consultancy
- New conceptual design
- Statics calculation/review
- Renting of logistics equipment
- Relocation management and technical support
- Preparation of technical drawings and/or construction plans
- Evaluation of logistics equipment
- Provision of interim solutions

Assembly and installation services*

- Installation of logistics equipment
- Modifications and extensions
- Overhauls
- Repair service
- Maintenance service
- Shelving inspections

**Manufacturer-independent, even during ongoing operation*

DLK takes good care of you irrespective of the sector in which you require assistance. There's also a massive potential for your plans given the intersections among our four business divisions.

Warehouse equipment for the textile sector is a specialism at DLK. Our vast experience in this field means that we can offer you a wide range of products and solutions.

LEVELMAKER®

The “next level” for your warehouse

DLK thinks three-dimensionally. Collaboration with our engineers, designers and structural engineers has enabled us to revolutionise our range of warehouse mezzanines.

> Warehouse mezzanines

Our unique and patented product development for the warehouse mezzanine sector called Levelmaker® is a “space multiplier” that represents the most efficient solution for increasing your logistics floor space. Sounds complicated? Far from it! It even enables use of conveyor equipment from various system manufacturers to be integrated without any issues.

And what’s more – Levelmaker® also has the potential to be used in other application areas:

> Staircases

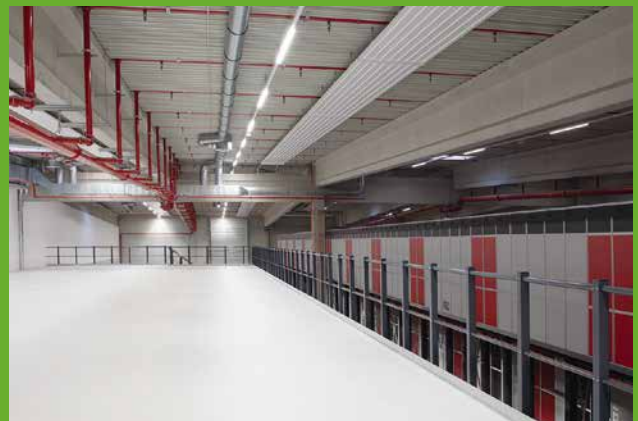

We can configure any steel staircases and escape staircases up to 9 storeys and 30 m high. These structures can be designed, delivered and, if desired, installed by our in-house engineering department.

> Balconies

The current construction boom demands more from the market than is available. Our Levelmaker® is also an option for the renovation sector when installing balconies.

Levelmaker® elements, powder coating (matt anthracite)

Newly gained storage space of around 500 m²

Our modern modular kit, which was first developed in 2017 and is based on standard elements, creates unimagined possibilities – even across large spans – and thus reduces your storage costs.

Multi-storey structure built to the highest safety standards

Seamless integration of conveyor equipment

Variable column grid for optimum space layout

Flexible shelving assembly and stocking

LEVELMAKER® – The advantages at a glance:

- Customised (special) solution including implementation for your business
- Levelmaker® modules can be quickly erected or dismantled again
- Flexibly expandable via the installation of stairs, railings, lighting, etc.
- Easy to combine with the likes of suspension levels for conveyor equipment and so much more
- Multi-storey warehouse mezzanines up to an overall height of 15 m are possible as standard
- High load capacity (up to 1,000 kg per m² as standard)
- Variable column grid, planned on an individual basis
- The space beneath the warehouse mezzanine remains usable (large distance between columns)
- No ageing process due to full galvanisation
- Rapid availability of components from DLK (held in stock)

**Further information is available on our website via
www.levelmaker.de**

DLK – Your integration partner

Use our services to achieve synergies

DLK can integrate flexibly into system or process workflows and assume a wide variety of roles. We can act on your behalf as an external service provider, idea provider, solution finder or strategic partner to collectively generate added value.

The building blocks to success from our products, services, industrial disassembly and dismantling and assembly and installation services divisions enable us to offer you diverse and modular options for (system) integration into existing concepts.

Your overall solution is always our top priority.

> **Why is DLK your ideal integration partner?**

We understand integration as a synergy that leads to increases in expertise based on jointly usable resources and offer you:

- Many years of experience with major warehouse logistics projects
- In-house product development and design departments
- Diverse individual solutions for your overall concept
- High levels of consultancy expertise from experienced professionals
- Rapid action and reaction in collaboration
- Extensive stock levels and in-house assembly staff
- Purchase and sale of used warehouse equipment

> **Sustainability for shared goals**

Business and economic aspects with regard to resources and costs can be decisive factors in modern logistics. When planning new projects with us, you can also rely on the recycling of high-quality equipment and materials, for example.

DLK industrial disassembly

Dismantling by specialists

New projects and the associated controlled dismantling of storage and conveyor equipment – as complete disposal or in partial areas, during ongoing operation – are often particular challenges.

If you're involved in the logistics services sector or as a property owner and need assistance with dismantling due to:

- Relocation of operations
- Redesign of existing equipment (even in partial areas)
- Process optimisation
- Technical modernisation
- Complete dismantling for new lettings

then we're the right partner for you!

DLK has the necessary expertise thanks to successfully completed major projects and its own team. The detailed planning, smooth processes and adherence to deadlines are at the top of our priority list.

> Disposal and recycling by experts

We can on request assume responsibility for proper disposal, taking into account all requirements for eco-friendly material separation. We also offer appropriate solutions via our network for any special cases involving hazardous, disruptive and recyclable materials, which relieves you of any concerns.

Our aim is to minimise the impact on nature from metals or other hazardous materials and substances.

> Purchase and sale of used warehouse equipment

The re-purposing of well-maintained warehouse equipment can be economically advantageous and expedient. DLK can potentially offer you options for the purchase of your used warehouse equipment.

We provide complete solutions from
a single source:

- Concept development
- Coordination of trades
- Implementation in coordination
with local partners
- Handling of hazardous, disruptive
and recyclable materials

It goes without saying that all on-site
aspects of occupational health and
safety and the safety of employees
are assured.

DLK processes

Jointly taking the steps towards efficiency

With vision:

1. Consultancy

We would be happy to visit you on site to gain a first impression of the premises and conditions.

This generally involves us collating all the relevant data and our colleagues providing an initial consultancy.

This joint dialogue is extremely beneficial to both you and us with regard to the next important step.

With understanding:

2. Conception

The crucial part of the work begins once the costs and project have been approved. Our teams start with planning/visualisation of the previously discussed logistical processes or systems.

Another exchange takes place at the end of each conception phase to finally determine the required project plan, milestones and schedule.

This involves close collaboration with your representatives to ensure transparency in the course of the project.

With energy:

3. Implementation

The time has come, DLK arrives on site. Our specialist in-house installers begin to install all the planned elements.

After completion, we conduct a proper, professional and recorded acceptance, including structural analysis or verifiable structural analysis.

1. OG

With flair:

4. Optimisation

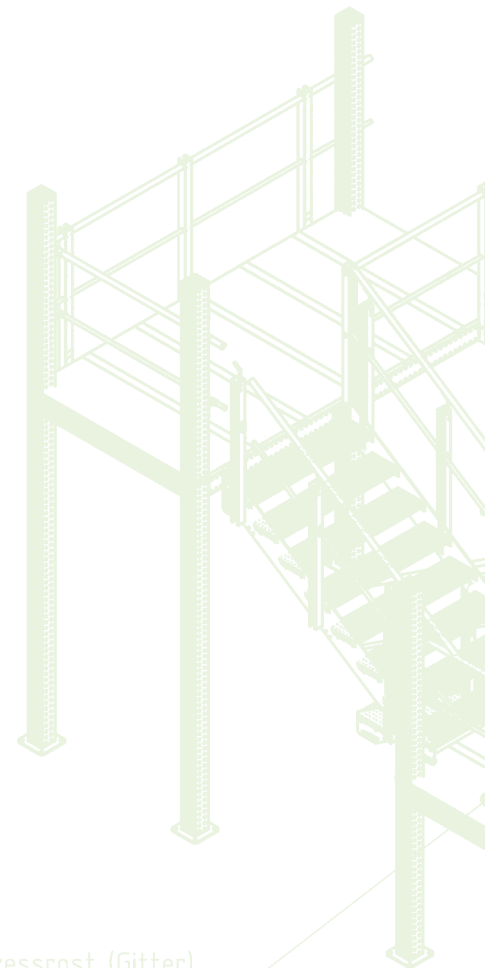

New logistical or technical processes are often complex and it only becomes apparent during ongoing operations that there is still potential for optimisation.

We won't leave you in the lurch if there are any fine-tuning adjustments to be made and will collaborate on the solution until everything runs perfectly and nothing stands in the way of final acceptance.

With passion:

5. Service

We're well aware of the importance of customer service. Whether during the joint project or even after successful implementation – we remain constantly and passionately committed to your requirements and will be there to provide advice.

The DLK team extends a warm welcome

DLK ReSale

Purchase and sale of used warehouse equipment

Repurposing of used warehouse/conveyor equipment, warehouse mezzanines, textile storage equipment or machines, together with accessories, is now commonplace in many sectors and is highly attractive from an economic perspective.

DLK comes to the fore when dealing with the disposal of old equipment due to new investments or a business closure.

The DLK online shop

We sell many components that trade, industry, crafts and other sectors require for their internal logistics. You'll find our current range of used products from various manufacturers/brands on attractive terms via:

www.shop.dlk.de

Consultancy by phone

Would you like to sell some of your warehouse equipment, or are you unable to find something in our online shop that meets your needs? We'll be happy to help – including by searching our customer network. Simply give us a call on:

Tel. +49 (0)5921-728130

Our installers take care to provide a professional, trouble-free disassembly, even under difficult conditions or during ongoing operation.

Certified safety and guarantee

Quality: our standard practice

As a manufacturer of structural steel components, our certifications include SGS-TÜV and the latest versions of European standards.

Our certifications:

Steel construction certification according to DIN EN 1090 1 (2/3)

Steel construction involves the verification of conformity, factory production control, manufacturer certification and CE marking for load-bearing steel components being regulated by DIN EN 1090.

FEM 10.2.02 (Finite Element Method)

A standard method for calculation and measurement of steel structures according to Eurocode 3.

CE certification according to EU Regulation 305/2011

DLK provides a guarantee
on all Levelmaker® elements
from the modular kit.

5
Years
Guarantee

DLK GmbH

Your reliable partner
